

# Dynasoft TeleFactura - Billing Features - Data Sheet

**Dynasoft  
TeleFactura**

Telephony and Data Billing Software

## Outline

Dynasoft TeleFactura supports and provides billing functionality for telecom service providers and carriers. The product is a Windows and Web-based suite of applications that offers a rich set of billing features. Dynasoft TeleFactura enables precise and reliable telecom billing, call rating and account reconciliation with a minimal investment as Dynasoft also offers hosted and outsourced service options to further mitigate start up cost. TeleFactura supports 5 different languages and can run on Microsoft Access, SQL Server and MySQL.

## Key Benefits

- TeleFactura organises and carries out all telephony, data and services billing for an unlimited number of phone users, operators, suppliers, resellers, Call Data Records (CDR) data, and price lists
- Services supported include: WiMax, Hotspot, WiFi, DSL, VoIP, fixed line, mobile, SMS, MMS, outbound and inbound calls, data services and any type of recurring or usage-based services
- Web portal for customers and distributors as standard
- TeleFactura Engine offers close integration with TekRadius to offer Radius and AAA capability
- TeleFactura supports 5 languages (Fr., Sp., It., Ger., En.) - Other languages included free of charge
- Twelve version and hosting options to fit most needs, including hosted and Software-as-a-service options

## Main Features

### Increase your turnover

- TeleFactura enables distributors to outsource their billing to the billing company through a branded billing functionality built into it
- Full reporting and account reconciliation tools
- Automatic messaging of user alerts and invoices to the customers
- Complex yet easy to use commission system for customers and distributors
- Least Cost Routing analysis
- Take advantage of free bespoke services with our annual support

### Designed for speed

- Up to 5,000,000 CDRs/hour with a single processor PIV PC
- Fully automated billing requiring no human intervention from retrieval of CDR data to sending out of invoices to customers and publishing of the data online in real time
- Support for Microsoft Access, SQL Server and MySQL
- Support for computer networked environments
- Main application is Windows-based and quicker to use than purely Web-based systems

### Better control

- Confidentiality guaranteed as all data is run locally, on your network and is not shared with Dynasoft or any other third party
- Accounting integration (MYOB, MS Accounting, SAGE)
- CLI, DID and Account Provisioning
- 350 reports for better invoice verification, revenue leak detection and Quality of Service (ASR, FAS, NER, ACD, PDD, ...) analysis
- Direct Debit, bank account and credit card entry screens
- Automatic retrieval of all CDR data
- Multiple currency, sales tax and invoice template billing
- Back-up utility via FTP or disk and role-based security
- Wizard-based for most import/export tasks

### More flexibility

- Support for an unlimited number of Rating Plans/Bundles
- Support for any type of services and products, not just voice or data
- Local-to-local voice billing for certain customers and local-to-national for other ones
- Multiple invoice templates
- Support for multiple invoice formats (XML, HTML, PDF, XLS, WORD, or CSV)
- Support for call pulse and call duration billing
- Inventory, DID/CLIs management, number portability and customer groups

## Specifications

- TeleFactura works with text file or database-driven CDRs
- TeleFactura can be integrated with existing solutions via the use of its database and the CDR files
- Unlimited number of customer CLIs
- No limitation in the format or number of CDR data
- Windows-based administration for the billing manager
- Web-based administration for resellers through TeleFactura CRM

## Operating Environment

- Processor: 866 MHz or faster, 32 or 64 bit
- Memory: 128MB or more
- Disc space: 245MB or more
- Operating system: Microsoft Windows NT 4 or more recent
- Database: Microsoft Access, MvSQL or Microsoft SQL Server
